

Silq ClearTract Catheter Patient Testimonials

“My son, Grant, sustained a complete C4 spinal cord injury in 2011 at the age of 22, which left him quadriplegic. As a result, the only way he can pass urine is through a suprapubic catheter. For years, we struggled with every standard catheter we tried... The failure of those catheters led to numerous ER visits, several middle-of-the-night 911 calls, and countless urinary tract infections requiring substantial amounts of antibiotics. ClearTract has become life changing for Grant because it uniquely prevents obstruction and associated emergencies that other catheters cannot prevent.

Since switching to ClearTract, Grant has had zero ER visits, zero 911 calls, and has not needed Botox treatments. His urinary tract infections have drastically reduced (if not eliminated) the use of antibiotics. We now have a predictable schedule and, most importantly, peace of mind. I would highly recommend ClearTract to anyone who uses an indwelling catheter—and I have done so many times.”

-Lisa Dutkiewicz

“I used to have chronic UTI’s when using the latex and plastic catheters. I struggled with the catheters for 3+ years in the sense of chronic infection, having to flush saline daily and use a compound antibiotic flush I would use 2/3 a week. From the time I started using Silq everything changed... If Silq made this big of a change in my quality of life I can only imagine how many other lives it can and has impacted. I have spoken to other Silq users, and they feel the same way I do.”

-Dulce Garcia

“My son Nathan who has been developmentally disabled since birth needed to have his condom catheter replaced by a suprapubic catheter in 2016 due to recurring urinary tract infections. Sometime in the last year the University of Michigan Hospital Urology Clinic received the SILQ catheter...this has been a life-changing event for not only Nathan, but also his group home and us, his parents who take him to his appointments! This has been like a miracle for us and are unbelievably grateful.”

Silq ClearTract Catheter Physician Testimonials

"Although urinary catheters are an integral part of any healthcare setting, they can cause significant complications, such as urinary tract infections and stone formation. In addition, urinary catheters can become obstructed or calcified. By providing a coating that resists bacterial and protein adhesion, Silq Technologies is bringing a game changing innovation to the care of patients who require catheters for bladder drainage."

-Evgeniy Kreydin, Rancho Los Amigos National Rehabilitation Center

"I recently had the opportunity to use Foley catheters with Silq coating, and I must say, it has been a gamechanger. Not only did the Silq coating promote biofilm resistance, but it also improved patient comfort significantly. As a urologist, I utilize a significant number of foley catheters in the course of providing urological care. Since switching to Silq coated catheters, the incidence of UTIs has dramatically decreased. The fact that patients who have had to rely on Foley catheters for an extended period report back to me the reduction in discomfort and irritation was remarkable. This has not only improved my patients' quality of life but also resulted in a reduction in healthcare costs and need for antibiotic treatments."

-Matthew Bui, Tower Urology Institute for Robotic Surgery, Cedars-Sinai

"I have been using the Silq ClearTract catheters in my neurogenic bladder patients who use chronic indwelling suprapubic tubes. Since I have been using the Silq ClearTract catheters, not only have we seen a decrease in symptomatic infection, but also decrease in obstruction and leaking from the catheter becoming clogged with sediment and debris. Just recently, I had three patients who were in the ER every other week for SPT changes because the tubes were clogged. Now I am seeing them every 4 weeks for change with no recent ER visits."

-Jennifer Linehan, St. John Cancer Institute
