

## ClearTract™ Physician Testimonials

Matthew Bui, M.D., Ph.D.

Director of Tower Urology Institute for Robotic  
Surgery and Minimally Invasive Surgery  
Cedars-Sinai Medical Towers, Los Angeles, CA

I recently had the opportunity to use Foley catheters with Silq coating, and I must say, it has been a gamechanger. Not only did the Silq coating promote biofilm resistance, but it also improved patient comfort significantly. As a urologist, I utilize a significant number of foley catheters in the course of providing urological care. The fact that patients who have had to rely on Foley catheters for an extended period report back to me the reduction in discomfort and irritation was remarkable. The smooth and soft surface of the Silq coating made a noticeable difference in my overall comfort level.

Moreover, the use of the Silq coating on Foley catheters had an impressive impact on reducing urinary tract infections. Generally, foley catheter-acquired infections are a major problem in the medical profession, costing billions of dollars in hospitalization and treatment. Before using Silq-coated catheters, I experienced unacceptable rate of recurrent UTIs in patients with traditional foley catheters. Since switching to Silq coated catheters, the incidence of UTIs has dramatically decreased. This has not only improved my patient's quality of life but also resulted in a reduction in healthcare costs and need for antibiotic treatments.

I highly recommend Foley catheters with Silq coating to anyone in need to long-term urinary catheterization. The combination of biofilm resistance, enhanced patient comfort, and reduced urinary tract infections makes these catheters an exceptional choice. Thanks to Silq coating, I now feel more comfortable and at ease, knowing that the catheter chosen is designed to minimize the risk of infections and provide a

higher level of comfort. It's truly a remarkable innovation that has made a positive impact on my patient's daily lives.
